5 Fun Facts about Sharks 五個關於鯊魚的冷知識

Sharks are interesting and important animals in the ocean. Let's learn 5 fun facts about sharks!

1. Sharks do not have bones.

Sharks only have cartilage (軟骨), and their large livers (肝) are full of oil, both help them to be buoyant (浮起).

2. Sharks have electroreceptor organs (電流接收器官).

Sharks have small black spots (斑點) near the nose, eyes, and mouth. These spots are special electroreceptor organs that allow (使...能夠) sharks to feel electromagnetic fields (電磁場) and temperature changes in the ocean.

3. Shark skin feels similar to (與...相似) sandpaper (砂紙).

Shark skin helps them swim faster by reducing (減少) friction (阻力).

4. Sharks can go into a trance (恍惚).

When you flip (翻) a shark upside down (顛倒), they become stiff (僵直) and stop moving.

5. Each whale shark's spot pattern(紋樣) is unique (獨一無二的).

Whale sharks are the biggest fish in the ocean. Every whale shark has a different spot pattern, just like a fingerprint (指紋).

In some movies, sharks are scary. Check more information about them. The more you know, the less you will fear. Stay curious! 😊

Grammar 文法小知識： The more..., the less... 越... 越...

Ex. The more Teresa eats, the less pants she can wear. (Teresa 吃越多，她能穿的褲子就越少。)

Songs 歌曲分享： 1. *Baby Shark* 2. *Shark - Throwing Muses* 3. *Salt & the Sea - Gregory Alan Isakov*

☆ Sharks' Information

Great White Shark 大白鯊	Whale shark 鯨鯊	Hammerhead Shark 雙髻鯊
		
又稱噬人鯊，是最大的食肉魚類，身長可達 6.5 米，體重 3200 公斤。鯊魚家族的明星，總是被各種魔化。	身體最長可達 13 公尺，最重可達 21 噸，是目前世界上體型最大的魚類，也是最溫柔的動物。因為充滿斑點，有人叫它們「繁星」。	又稱錘頭鯊，特殊的眼部構造擁有 360 度的全方位視角。它們一般在受到過度驚嚇時才會傷害人類。
